40
YEARS

Celebrating 40 Years of Innovation and Design

Founder of Ark, Richard Arakelian, a fitter and turner by trade saw a need and demand in Australia for tow balls in 1978; fast forward 40 years of innovation and design and Ark Corporation are now industry leaders in trailer Parts, towing and 4WD accessories. With an ever-growing inventory of well over 800 different trailer parts and accessories, from the tough as nails XO Series jockey wheels and couplings to the pioneering portable power system like the ArkPak, it's no wonder why Ark is one of the most trusted names when it comes to your caravan, camper and trailers.

Based in Sydney, the company is comprised of people who live and breathe the outdoor lifestyle, from camping, 4WDing, hunting, fishing, and boating. With a team that is dedicated to this lifestyle, Ark can continue to grow and develop its products. A range which will stand the test of time and the harsh Australian environment, making life simpler for those in pursuit of their own adventures through this great and vast land.

The Ark Difference

We are true innovators.

We use our love of the outdoors to drive our innovation.

We don't follow trends, and we do not copy; we have a genuine desire to evolve and improve, always.

We are proudly 100% Australian owned and run.

We know how varied the Australian landscape can be and the kind of issues you can face when you are out camping, caravanning, boating, fishing and 4WDing and we design our products accordingly.

Ark was born out of a simple desire for products and quality that couldn't be found in the market. 40 years' experience has taught us that following our desire for better will lead us to great places and in turn, take Australians further, in smarter and better ways.

There's nothing better than getting outside and exploring all that Australia has to offer. Anyone with a love of the Australian outdoors can tell you that she can be as unforgiving as she is beautiful, which means that quality is of the utmost importance.

WEIGHT DISTRIBUTION SYSTEM

Excessive tow ball weights of caravans and trailers can alter the handling of the tow vehicle which can pose serious safety concerns especially at high speeds. Less weight over the front axles of the tow vehicle dramatically reduces steering control and braking. Ark have designed a range of Weight Distribution Systems to overcome these issues by evenly distributing the excess tow ball weight and balancing all the axles, this enables the driver to safely and confidently tow at legal speeds.

PART NO:	SUITED TOWBALL WEIGHTS:	PACK TYPE:
WD600R	135-275kg*	CARTON
WD800R	275-365kg*	CARTON
WD1200R	365-545kg*	CARTON

Weight Distribution Systems
Complete with mounting brackets, spring bars, chains, 10" hi/low shank, ball mount, hitch pin, lifting bar and all necessary mounting hardware.

*Ark's weight distribution systems may exceed towing capacity of tow bar or vehicle, always refer to the towing capacity of tow bar and vehicle.

ELECTRIC BREAK-AWAY KIT

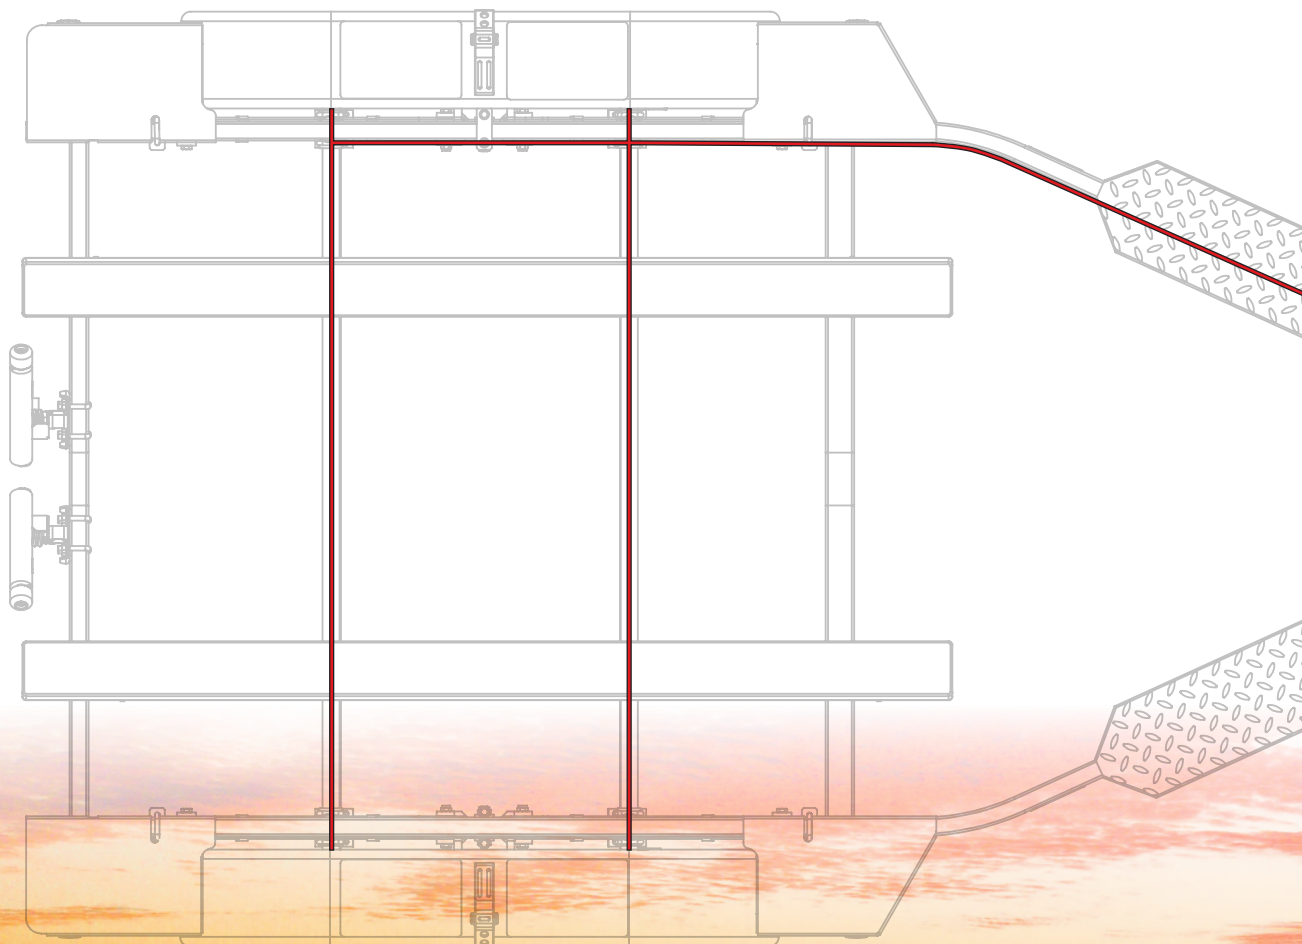

PART NO: PACK TYPE:

EBK26	BULK
<p>“Interceptor” Break-Away System Suitable for 2, 4 and 6 wheel brake systems, Interceptor acts as both a battery tester and battery charging system which is built to bring trailers safely to a stop should a trailer be disconnected while driving.</p>	

PART NO: PACK TYPE:

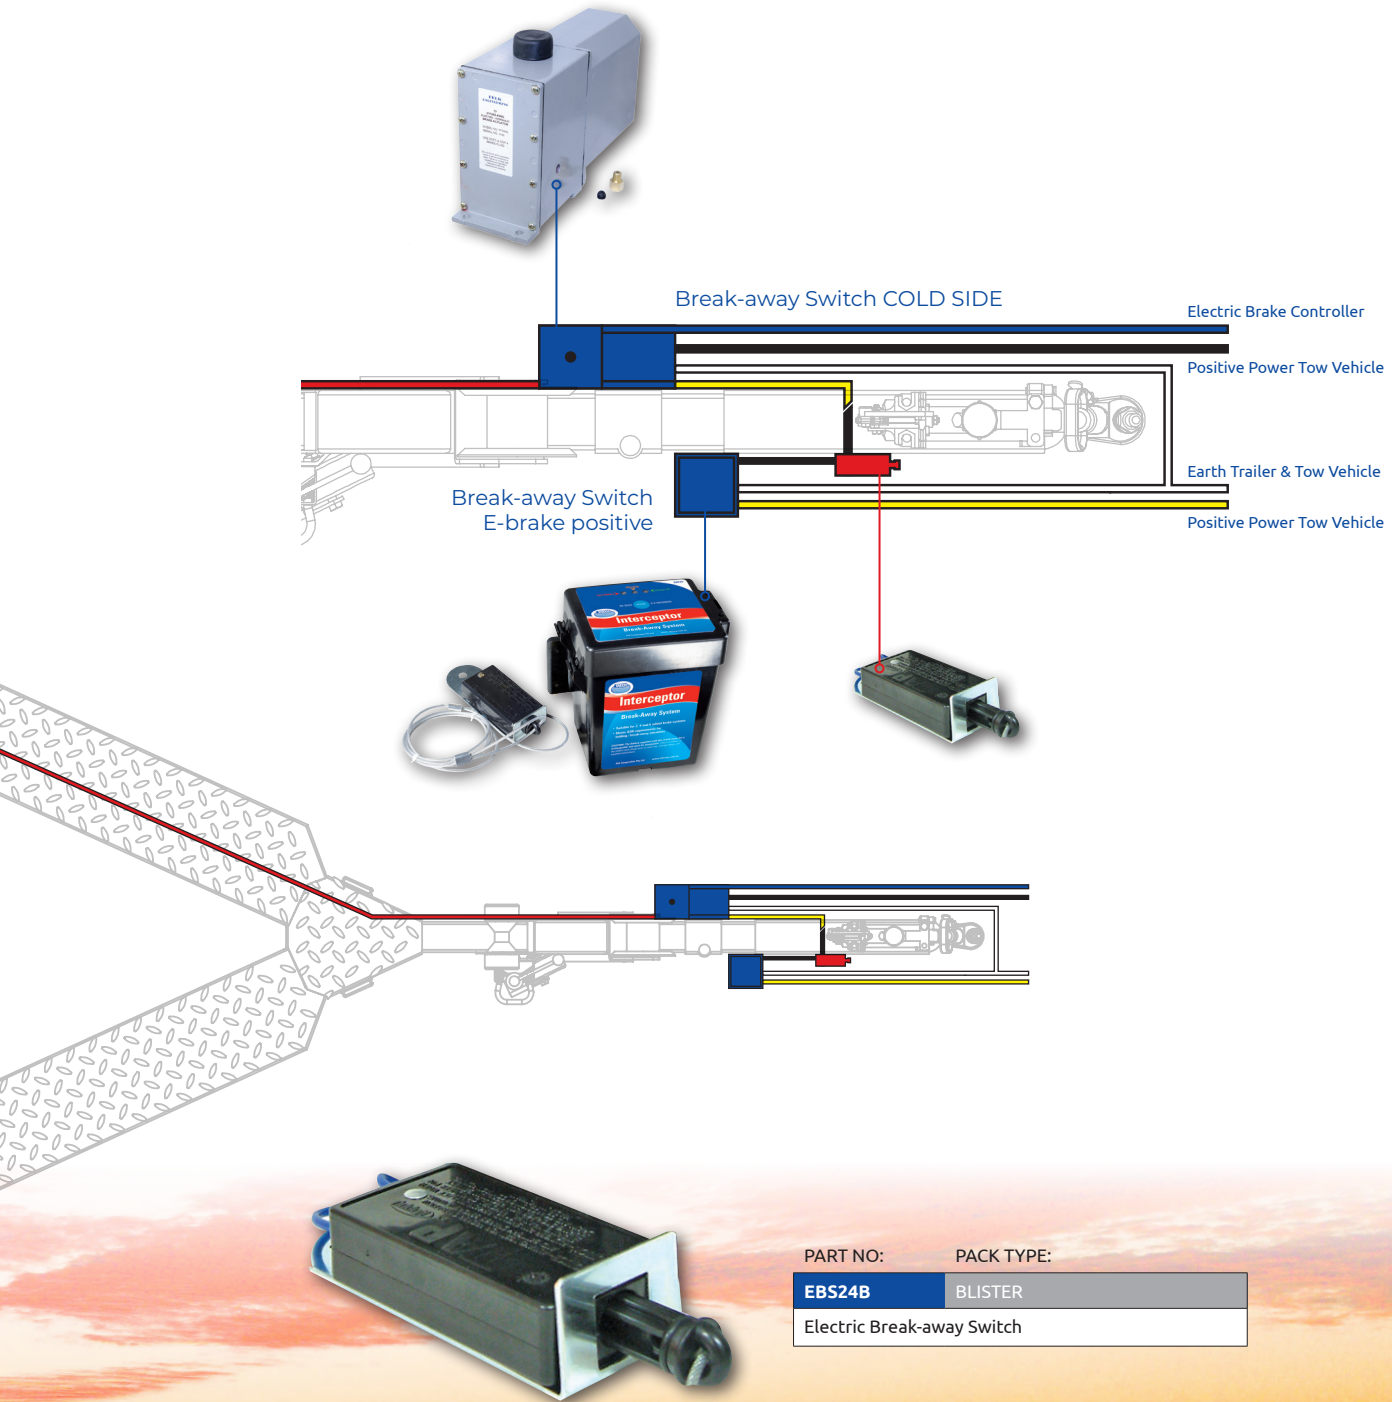

HBA1600	BULK
<p>Electro Hydraulic Actuator • 1600PSI system • Separate enclosure for oil reservoir & PCB • compact design 255mm(l) x 84mm(w) x 150mm(h) • works with all proportional in car controllers • not compatible with time based controllers</p>	

ELECTRO-HYDRAULIC ACTUATOR

Ark's Electro-Hydraulic Actuator offers better braking performance than over-ride brakes and allows full braking control through the tow vehicles in cab controller. It's compact and advanced design meets and exceeds the ADR for "Emergency Brake Systems" with the use of a standard 5Ah break-away battery and allows for legal fitment of hydraulic disc brakes on trailers over 2 tonne in Australia.

ADR states - Every trailer having a "Gross Trailer Mass" over 2 tonnes must be equipped with an efficient 'Emergency Brake System' which will cause immediate automatic application of it's 'Brakes' in the event of the trailer accidentally becoming disconnected from the tow vehicle. 'Brakes' so applied must remain applied for at least 15 minutes.

Inline Harness Trailer Socket Tail
 Nite-Lite 7 pin flat socket connected to 1.5m of cable. Suits Part No. AH17.

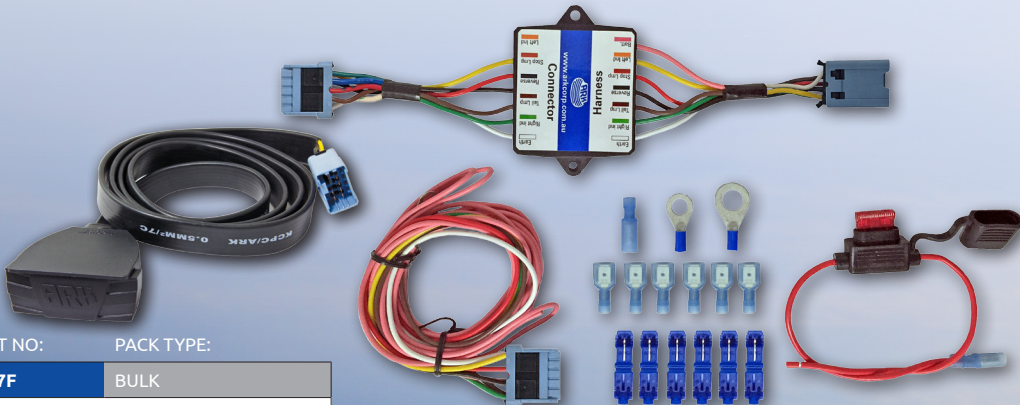

ECU HARNESS KIT

With the technology advances in computer diagnostics built-in vehicles today, it is not uncommon for trailer electrics to interfere with such computer systems. Most European vehicles emit pulse current for their lighting which is sometimes not compatible with the LED lighting used on trailers, as they need constant current to operate. Common errors include computer system faults such as flickering symbols on dashboards and flashing external lights. Ark's range of ECU harness eliminates such problems, suitable for most vehicles but not suitable for vehicles running CANbus systems.

JOCKEY WHEELS - XO SERIES

NOWHERE IS OFF LIMITS

Ark's XO Series Jockey Wheel is probably the toughest, most advanced Jockey Wheel in Australia today

But not only is it tough, it's also versatile - with multiple height options, a highly maneuverable trailing yoke design, different yoke locking positions and now available in many sizes, weight ratings and styles.

Thoroughly tested and continually improved, the XO Series Jockey Wheels has fast become a standard within the camper trailer and caravan industry.

EZI-GUIDE - BOAT LOADING SYSTEM

Easy boat retrieval whatever the weather!

With the Ark **EZIGUIDE** | SELF-ALIGNING BOAT LOADING SYSTEM

Strong winds, current or rough water will no longer be an obstacle for launching and loading your boat. The Ezi-Guide will simplify launching or loading and will always guide your boat safely to the centre of your trailer.

- Solo launching and loading
- Avoid loading your boat off the rollers and damaging your boat
- U-bolt Ezi-Mount system (no power tools or drilling required)
- Slotted mounting bracket to suit 50 - 75mm cross beams
- 50mm U-bolts supplied
- Rust resistant dacromet finish

PART NO:	PACK TYPE:
EG10	DISPLAY CARTON
Suits power boats - 4.2 to 4.8m (14 to 16ft) & sailboats - 4.8 to 6.0m (16 to 20ft)	

PART NO:	PACK TYPE:
EG11	DISPLAY CARTON
Suits power boats - 4.8 to 6.0m (16 to 20ft) & sailboats - 6.0 to 8.5m (20 to 28ft)	

PART NO:	PACK TYPE:
EG13	DISPLAY CARTON
Suits power boats - 6.0 to 8.5m (20 to 28ft)	

Retrieving your Boat

Ezi-Guides are a self-aligning boat loading system and can be used in either winch on or drive on retrievals. Tide direction and wind speed should be taken into consideration and extra care should always be taken when loading the boat in these conditions. When driving the boat onto the trailer, boat entrance speed and direction of travel are important factors to consider, misaligning the hull with the centre of the Ezi-Guide can cause damage to both the Ezi-Guide and the hull of the boat. (ARK Corporation is not liable for any damage sustained to the boat hull on improper use, excessive boat speed or misalignment) For maximum efficiency when loading the boat

- Reverse the trailer into the water until the last keel roller is level with the water, any deeper will lose the effectiveness of the Ezi-Guide system.
- Drive the boat towards the trailer, recommended approach is IDLING* speed
- Align the bow with the centre of the Ezi-Guide systems and drive boat onto trailer
- Fit winch strap and safety chain

*IDLING speed is when the throttle is just clicked forward of neutral

EZI-GUIDE - FITTING INSTRUCTIONS COMPATIBLE WITH EZI-GUIDE MODELS EG10, EG11 AND EG13.

Tools required: Marker & 19mm socket or spanner

Ezi-Guide suits both 50mm and 75mm trailer cross members. U-bolts supplied suit 50mm x 50mm cross members only, additional U-bolts need to be purchased for larger 75mm cross members.

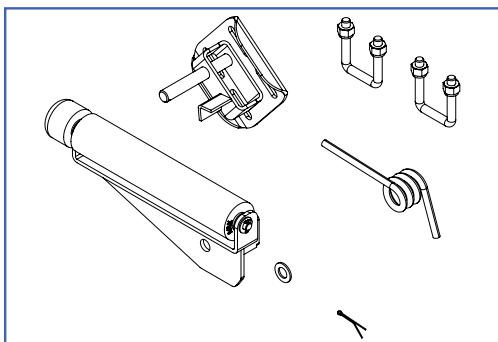

DIAGRAM 1

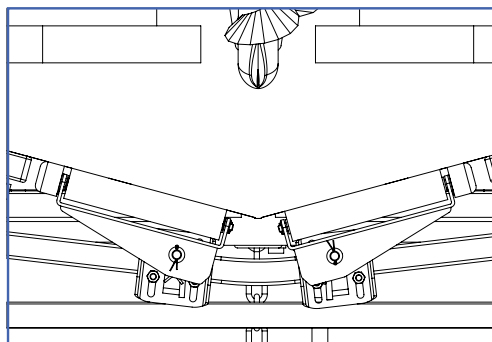

DIAGRAM 2

- 1.) Begin with the Ezi-Guide LEFT side.
Remove split pin, washer, spring and mounting bracket from the roller arm (refer Diagram. 1)
- 2.) Reassemble the Ezi-Guide without the spring.
- 3.) Place mounting bracket against trailer cross member as close to the keel roller and align the roller arm against the bottom of the hull (refer Diagram. 2)

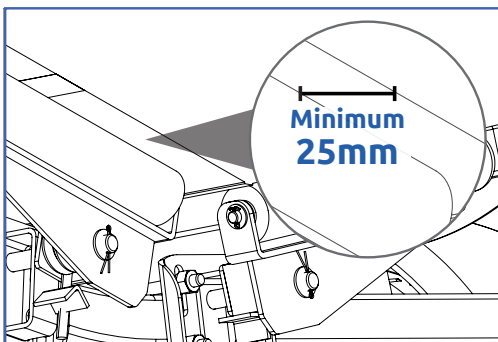

DIAGRAM 3

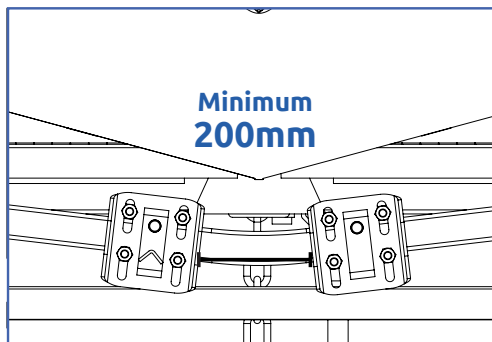

DIAGRAM 4

- 4.) Ensure that the distance from the roller arm and the back of the boat is minimum 25mm (refer Diagram. 3)
- 5.) Minimum distance between the LEFT and RIGHT mounting bracket is 200mm (refer Diagram. 4) the mounting brackets can be adjusted further outward based on the hull design but mounting the brackets too far apart will lose the effectiveness of the Ezi-Guide system.

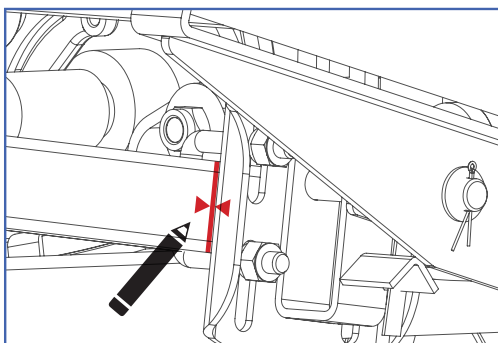

DIAGRAM 5

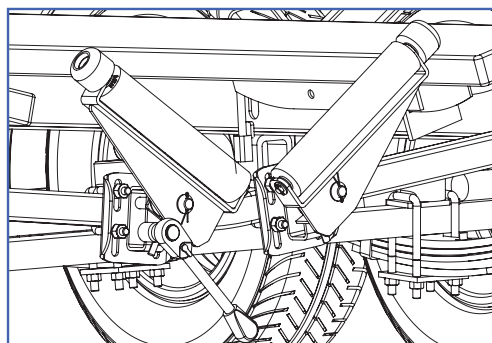

DIAGRAM 6

- 6.) At the outer edge of the mounting bracket, mark a vertical line against the trailer cross member then mark an arrow > against this line on the cross member and another arrow < on the mounting bracket for alignment reference when fitting the Ezi-Guide at the boat ramp (refer Diagram. 5)
- 7.) Reassemble the Ezi-Guide LEFT side with the spring.
- 8.) Repeat S53step 1 – 7 for the Ezi-Guide RIGHT side.
- 9.) Install the Ezi-Guide at a boat ramp as the boat should be off the trailer. Using the vertical line and arrows marked previously, align Ezi-Guide mounting brackets with marks and mount with U-bolts and tighten nuts utilising a 19mm socket or spanner (refer Diagram. 6)
- 10.) Make a test run and ensure roller arms are against the bottom of the hull as originally set.
- 11.) Adjustments can be made when the boat is off the trailer again, mounting brackets can be adjusted in all directions.

TRAILER COUPLINGS - XO SERIES

EXTREME OFFROAD SERIES

NO-SWITCH, QUICK-HITCH EXTREME OFF-ROAD COUPLING

FULL OFF-ROAD ARTICULATION

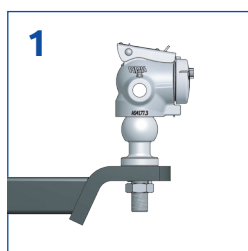

Utilise your 50mm tow ball for both standard and off-road towing applications without the need to switch your hitch.

The unique safety latch system allows for easy use - just lift the safety latch and the coupling automatically locks over the tow ball. The red or green indicator will signal whether the coupling is locked on the tow ball and safe to tow.

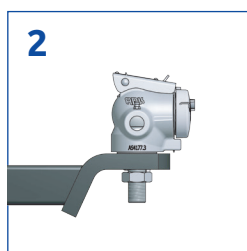

XO Series Couplings will make your next adventure safe, simple and enjoyable

Fits over 50mm tow balls that comply with Australian Standards AS4177.2 except for 50mm tow balls with a flat flange

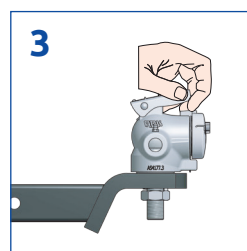

EASY AND QUICK-HITCH LOCKING SYSTEM

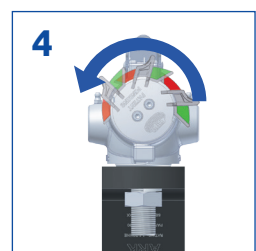

1 Align coupling head over tow ball

2 Lower coupling head over tow ball

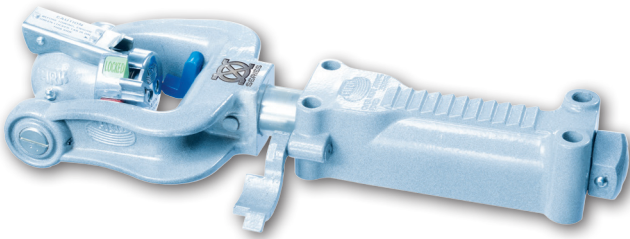

3 Raise safety catch lever to engage auto-locking

4 Coupling automatically locks onto tow ball

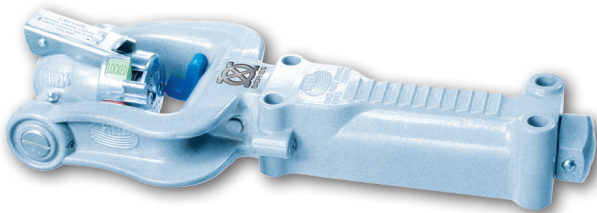

TRAILER COUPLINGS - XO SERIES

Whether you are looking to improve your off-road capability, or just tired of constantly switching between an off road hitch and a standard ball hitch, then the Ark Extreme Off-road Coupling is for you!

TRAILER SAFETY CHAINS

VSBI states - Trailers must be fitted with safety chains that are marked in accordance with the relevant Australian Standard complying with the following:

- Trailers that do not exceed 2.5 tonnes ATM must have at least one safety chain complying with Australian Standard AS 4177.4-1994 or Australian Standard AS 4177.4-2004 'Caravan and light trailer towing components – Part 4: Safety chains up to 3500kg capacity
- Trailers over 2.5 tonnes and not exceeding 3.5 tonnes ATM must have two safety chains of designation of 3500kg complying with Australian Standard AS 4177.4-1994 or Australian Standard AS 4177.4-2004

Trailer Safety chains are provided in four designations as per the Australian Standard and are referenced according to the aggregate trailer mass. The designations and the corresponding aggregate trailer masses are in in the rating table below.

Suits 10mm chain and is rated up to 3.15T. For use with the XO Coupling Base Plate Part No. XOCBPV4

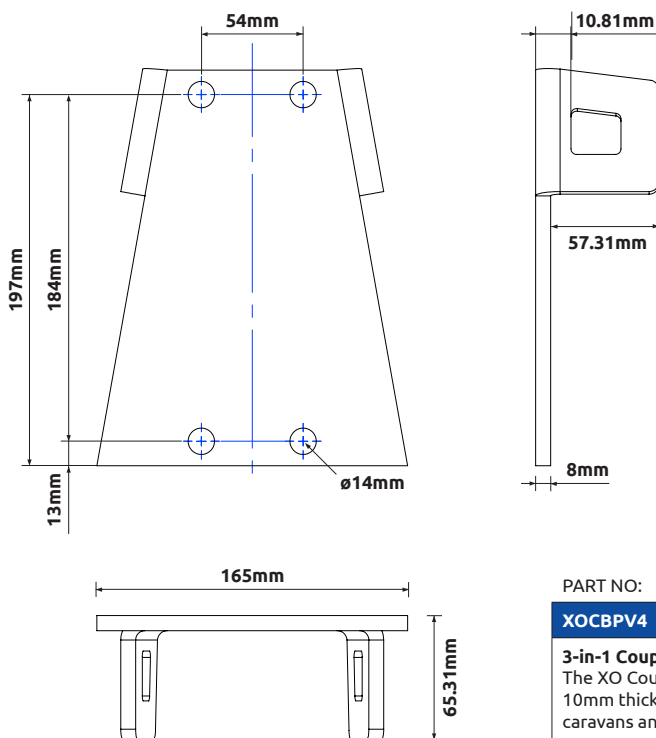

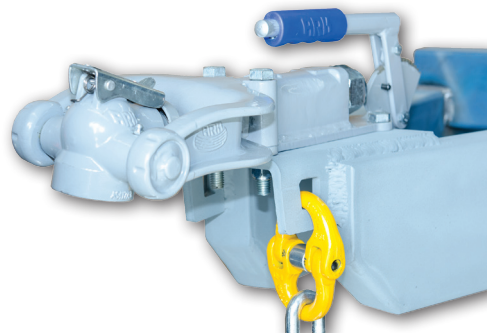

TRAILER COUPLINGS - XO SERIES - BASE PLATE

Ark have released a new **XO Series Coupling Base Plate**, that makes mounting of both coupling and trailer safety chains to the trailer quicker, easier and most importantly, safer than ever before.

Safety chain attachment points are the means by which the safety chains are attached to the drawbar. These points must be located as near as practicable to the tow coupling. Where two points of attachment are required, they must be mounted one on either side of the centreline of the drawbar.

The VSB1 states "trailers over 2.5 tonnes and not exceed 3.5 tonnes ATM must have two safety chains of designation of 3500kg complying with Australian Standard AS4177.4-1994 or Australian Standard AS4177.4-2004".

In our opinion, fitting these chains by hammerlock shackles onto the Ark XO Series Coupling Base Plate is a safer alternative to welding half a link to the drawbar as both the hammerlock shackles and the XO Series Coupling Base Plate are rated and tested accordingly in comparison to a half link weld which could not have proper penetration between two surfaces.

TRAILER COUPLINGS - PARTS & ACCESSORIES

Ark's new low profile brake arm is suitable for use with the XO Series and standard over-ride couplings specifically with trailers being towed by 4WD's with tailgates or opening rear doors. The offset handgrip allowed us to push the profile low and with an overall height from base of the coupling to the top of the handle of only 100mm, makes the Ark low profile brake arm the lowest profile in the industry. Designed in Australia: it suits mechanical disc and drum brake trailers, is manufactured by pressed steel with a comfort grip handle, suits industry standard 4 bolt couplings and is available in various finishes.

AXLES - CUSTOMISED

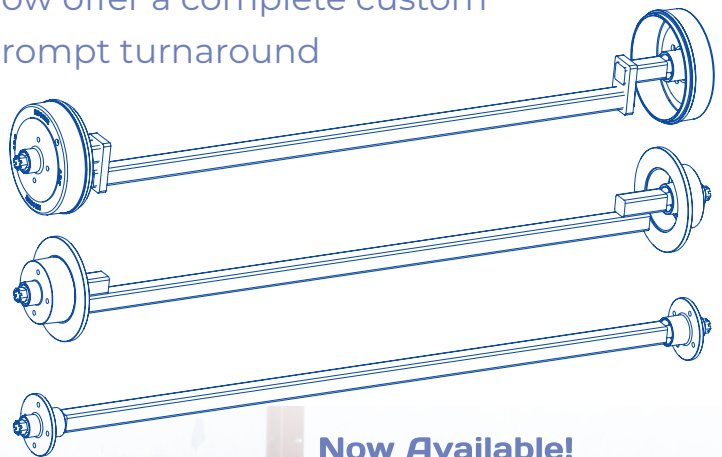

CUSTOMISED AXLES

Ark has expanded its facility and with the purchase of a new state of the art CNC lathe can now offer a complete custom axle fabrication service with a prompt turnaround time effectively increasing productivity for our customers

Options are now available between imported axles and Australian made steel and with a semi-automated cutting line, axles can be cut and machined from the shortest of stubs to axles up to and including 100" in length.

Ark has also included multiple welding stations within its expansion and have the capability of offering custom overlay, drop and straight beam axles from 39mm to 50mm in size fitted with either mechanical, hydraulic and electric brakes.

Our friendly staff are available to help with any axle enquiry and can tailor an axle to suite your needs.

AXLE DROP PLATES

Drop plates are typically used on trailers where low access is required such as race car trailers or horse floats, these plates join the main axle beam to a stub axle essentially creating the "drop" to lower the trailer chassis closer to the ground.

TANDEM SPRING KITS

Ark's Tandem Rocker Kits are designed to transfer the load and evenly distribute the weight over the trailer's axle and suspension system. The Tandem Rocker Kits are modular, meaning you order the kit as per required rocker system then order the shackle springs in either centre bolt, offset bolt or a combination of the two based on axle spacing and wheel sizes.

ARK IS AN AUSTRALIAN PACKAGING COVENANT SIGNATORY

Ark Corporation is honoured to have made a voluntary commitment to sustainable design, use and recovery of packaging. By reducing the environmental impacts of consumer packaging by encouraging improvements in packaging design, higher recycling rates and better stewardship of packaging, Ark Corporation hopes to make the future for customers, peers and fellow signatories greener and continually more sustainable.
